

### Instructions:

The mount is shipped assembled and ready to install. Along with an extra mirror base for left-hand thread applications. This mount system threads into either one of the unused mirror mount holes found on many metric handlebar control pods. Please follow the installation instructions carefully. If the un-used mirror mount locations have plastic plugs, these must be removed.

**Step 1.** Test fit the mirror base into the mirror mount hole to determine if it is standard (right-hand thread) or reverse (left-hand thread). Install the mount from the top with the correct base (**right-hand is marked with a dot at the threaded end**) into the unused mirror mounting hole in the handlebar control assembly and tighten firmly using a 19mm or  $\frac{3}{4}$ " open wrench.

**Step 2.** Adjust the pivot angle by adjusting the **Pivot Screw** and adjust the rotation as needed by adjusting the **Base Screw**. To remove the entire upper section of the mount. Remove the **Base Screw** and lift straight out.

**Step 3.** The mount has a 17mm pivoting ball shaft that allows for more flexibility in angles of mounting. With the mount secure, now install the device onto the shaft by first inserting the ring onto the shaft. Then snap on any 4G Techmount accessory top and re-tighten the locking ring.

Note: The maximum weight of your mounted device should not exceed 2 lbs. (1 k). Remember to snug all fasteners prior to riding.

Note: Optional Accessory Top Shown Above
