

DRL

Daytime Running Light

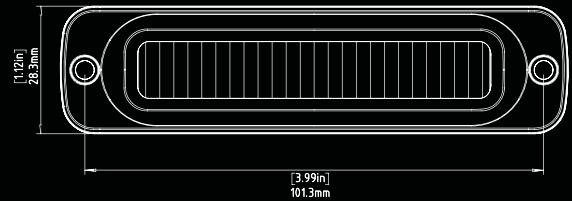

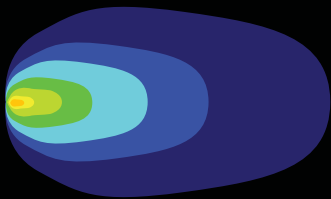

Modular Visibility Pods

These ultra low-profile LED pods are shockingly bright and can be installed virtually anywhere on your bike.

Like emergency strobe lights, the visibility optics are designed to concentrate the light at the source as opposed to project it down the road. While ideal for daytime and nighttime conspicuity, these lights will also provide a noticeable spread of light out from the vehicle.

LEDs: (6x) 1 Watt LEDs
Power Draw: 1 amp
Beam Distance (Spot): 125 ft
Beam Width (Spot): 85 ft

Raw Lumens: 1500
Intensity: Dual Intensity
Operating Voltage: 12 VDC
Pod Size: 4.25" x 1.125"

DRL FLOOD BEAM // DISTANCE: 125 FT // WIDTH: 85FT

Dual Intensity, Three Color Options

With an integrated dual intensity circuit, these lights can be wired to run at full intensity, half intensity or automatically switch between the two with your motorcycle's original high beam switch or brake circuit.

Use the white and amber pods as DRLs, use the amber pods as auxiliary turn signals or use the red pods to create super bright auxiliary brake lights.

Four Mounts = Infinite Possibilities

The modular light pods are designed to seamlessly mate with any of the four low-profile mounting kits to guarantee a quick and easy installation on any vehicle. Once installed the pods will practically disappear when switched off but will command attention when illuminated.

(A) Flush Mount Kit
DNL.DRL.10200

(B) Fender Mount Kit
DNL.DRL.10000

(C) Offset/Dual Plate Mount
DNL.DRL.10100

(D) Plate Mount Kit
DNL.B6.10000
